FREE GUIDE

STRONG THROUGH MENOPAUSE

Weight training for muscle, bone and energy through perimenopause, menopause and beyond.

WHY IT MATTERS
What falling estrogen does to muscle and bone

WHAT WORKS
The kind of training bone actually responds to

YOUR PLAN
A twice-weekly routine, how heavy to go and a tracker

WHY IT MATTERS

LESS ESTROGEN. MORE STRENGTH.

As estrogen declines, women lose muscle and bone faster than before. That affects strength, metabolism, balance and the risk of fractures. Your body still responds to training at every age, and lifting is one of the most effective ways to push back.

~10%
average loss of lower-spine bone density over the 10-year SWAN study, much of it around menopause

~3 yrs
window of fastest bone loss: from about a year before the final period to two years after

2×
weekly supervised sessions improved spine and hip bone density in the LIFTMOR trial

WHY LIFTING BEATS GENTLER EXERCISE FOR BONE

Walking, yoga and swimming are great for your health, but on their own they don't give bone much reason to get stronger. Bone responds to load: challenging resistance and some impact.

> **The LIFTMOR trial:** postmenopausal women with low bone mass did two supervised 30-minute sessions a week of high-intensity resistance and impact training for eight months. Their spine and hip bone density improved compared with a gentler home program, and no fractures were reported. The key was close supervision and gradual progression.

WHAT A GOOD PLAN INCLUDES

01

REAL CHALLENGE

Weights where the last two reps of each set take real effort, not light weights for endless reps.

02

PROGRESSION

Add a little weight or a few reps as you get stronger, week after week.

03

IMPACT & BALANCE

Small hops or heel drops if your doctor agrees, plus balance work to prevent falls.

YOUR STARTER PLAN

TWO WORKOUTS. TWICE A WEEK.

Alternate Workout A and Workout B on non-consecutive days. Rest 90 seconds between sets. Start lighter for the first two weeks while you learn the moves, then build up.

WORKOUT A

MOVE	SETS × REPS	EASIER OPTION	COACH TIP
Goblet squat	3 × 8	Sit-to-stand from a chair	Chest tall, knees track over toes
Dumbbell row	3 × 8 each side	Band row	Squeeze shoulder blade back
Push-up	3 × 6–10	Incline or wall push-up	Lower slowly, one straight line
Heel drops	3 × 10	Rise onto toes, lower slowly	Only if cleared for impact

WORKOUT B

MOVE	SETS × REPS	EASIER OPTION	COACH TIP
Romanian deadlift	3 × 8	Hip hinge with a dowel	Hips back, weights close to legs
Split squat	3 × 8 each leg	Hold a rail, shorter range	Front heel stays down
Overhead press	3 × 8	Seated, lighter dumbbells	Ribs down, exhale as you press
Single-leg balance	3 × 20–30 sec each	Fingertips on a wall	Soft knee, eyes on one spot

HOW HEAVY SHOULD IT FEEL?

EFFORT 1–10	WHAT IT FEELS LIKE	WHEN TO USE IT
5–6	Could do 4–5 more reps	Weeks 1–2, learning the moves
7–8	Could do 2–3 more reps	Most of your training
9	One more rep, maybe	Occasionally, with a coach watching

COMMON WORRIES, ANSWERED

LIFT WITH CONFIDENCE

"WON'T I GET BULKY?"

Building large muscles takes years of very specific training and eating. For most women, lifting creates a stronger, firmer and more capable body.

"IS IT SAFE IF I HAVE LOW BONE DENSITY?"

Supervised, progressive training has been studied in women with low bone mass with good results. Talk with your doctor first, and work with a coach who builds you up gradually.

"WHAT ABOUT LEAKING OR PELVIC PRESSURE?"

Exhale as you lift and don't hold your breath. If symptoms continue, a pelvic floor physical therapist can help, and you can keep training while you work on it.

SUPPORT YOUR TRAINING

- **Protein at every meal:** it gives your muscles what they need to rebuild after training.
- **Sleep and recovery:** leave a day between strength sessions and protect your sleep when you can.
- **Keep walking:** it supports your heart and mood alongside your lifting.

TRACK YOUR PROGRESS

DATE	SQUAT	DEADLIFT	ROW	PRESS	ENERGY (1–10)

TRAIN WITH A COACH IN BUCKHEAD

Every session at Alloy Personal Training Buckhead is coach-led, about 50 minutes, and scaled to your level in a small group. Your first visit starts with a conversation about your goals.
